Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 3-9 and 11-14 are rejected under 35 U.S.C. 102(b) as being anticipated by Algirdas (FR 2,296,311).

3. With respect to claims 1 and 3-8, figure 3 of Algirdas discloses a logic circuit comprising:

A pseudo-NMOS circuit, the pseudo NMOS circuit comprising:

A first PFET (12) electrically connected between a power supply (VDD) and an output node (14);

An NFET circuit (10's) connected between the output node and ground and having a plurality of inputs (A..N);

A second PFET (26) electrically connected between the power supply and the output node, the second PFET being controlled by a signal at the output node;

A control circuit (22, 24) for turning the second PFET ON and OFF based on the signal the output node;

Art Unit: 2819

Wherein the control circuit sets the second PFET to ON when the signal at the output node HIGH, and sets the second PFET to OFF when the signal at the output node is LOW.

4. With respect to claims 9 and 11-14, figure 3 of Algirdas discloses a logic circuit for reducing output noise (**the claimed functions of the claimed invention and the prior art have to be the same since both are the same configuration**), comprising:

A pseudo NMOS circuit comprising:

A load PFET (12) electrically connected between a power supply (VDD) and an output node (14);

An NFET circuit (10's) connected between the output node and ground and having a plurality of inputs (A..N);

A feedback PFET (26) electrically connected between the power supply and the output node for reducing noise, the second PFET being controlled by a signal at the output node;

A feedback circuit (22, 24) electrically connected to the feedback PFET, wherein the feedback circuit sets the feedback PFET to ON when the signal at the output node HIGH, and sets the feedback PFET to OFF when the signal at the output node is LOW.

Response to Arguments

5. Applicant's arguments with respect to claim1, 3-6, 9 and 11 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 2819

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
